

Winter 2001

As we enter the real 21st century, we extend our best wishes for happiness, health and prosperity in the coming years.

This newsletter contains new and important information that you and your staff need to know about.

Quotes will be coming to you in an improved easier to read, more specific format. Feel free to call with any questions or comments when you receive them.

Our price lists have been updated and refined (for your non-quote job pricing). Copies are included in this mailing. Call for additional copies or questions.

The century 6500 "special introductory discount offer" has been received with much positive attention: Don't forget! Orders must be received by the end of March and delivered by the end of May, (20% off the window price, up to \$100.00).

A "new construction" extruded nailing fin system is now available for all of our 3 1/4" depth windows, (head and jambs only). The fin is adjustable to three size positions. Call to request dimension detail drawings.

In addition to our exterior mounted landmark 5/8" grid we are offering a frequently requested 7/8" width size.

The legend 9000 window is going to be manufactured with some new improved features. The top and bottom finger grip rails have been deepened and re-shaped for better

leverage and operation. The tilt latch custodial system will be made with the allen wrench set up similar to the century 6500 window.

Please visit our own website (www.championwindows.com) which has been upgraded and now contains test reports, window specifications and shop drawings, upon request. Additional **Champion** information will be accessible through The Construction Blue Book (www.thebluebook.com) and Sweets Supplemental Catalogue (www.sweets.com) websites.

Champion continues to set the pace for the industry when it comes to quality, value, service and dependability.
